education

School of Modern Music
Wrocław
October 2017 - July 2019

Wroclaw University of
Technology, Department of
Electronics, Programming
October 2013 - July 2017

Fullstack developer focused on frontend. Experienced in frontend architecture, design patterns, developer tooling, performance, architecture decision records, junior developers guidance, SEO, and design systems. I have introduced design tokens, improved codebase standards, and made couple to monorepo/poly-repo migrations.

I have also led **freelance commercial** and **non-commercial** projects, combining design leadership, product delivery, implementation, and client communication. I care about clean systems, but I value long-term product impact over unnecessary complexity.

commercial experience

BKVibro senior software dev

2024 Nov - now
<https://bkvibro.com/>

Luxai freelance, fullstack & frontend lead

Jun 2023 - May 2024
<https://luxai.com>

Beeyay frontend lead

Jun 2021 - Aug 2023
<https://beeyay.com>

UpHotel freelance, fullstack, project delivery

Jan 2022 - Mar 2022
<https://uphotel.pl>

FutureOn freelance, fullstack, project delivery

Jan 2020 - Jan 2021
<https://publicon.pl>

Silobreaker frontend dev

Jul 2019 - Jun 2021
<https://silobreaker.com>

Teleste frontend dev

Jul 2018 - May 2019
<https://teleste.com>

Nokia junior fullstack dev

Jun 2016 - Jul 2018
<https://nokia.pl>

IBM intern security specialist

Jun 2015 - Oct 2015
<https://ibm.com>

non-commercial projects

<https://highmaintenance.no>

SPA, business website. **cool stuffs:** well optimised localization (server site with i18n integrated)

<https://mlodzimaglos.com.pl>

primary school newspaper. **cool stuffs:** this website is using bunch of nextjs features and it's completely **backendless**

hacknation - Bydgoszcz 2025

hackathon attend. To see results of my team work: <https://rekosiewi.cz/portfolio>

aside from programming

Proficient in music production env.
Chess fan and untalented player.
An amateur aspiring heavyliifter.
Grew up getting lost in sprawling, text-heavy CRPGs.
Best dude of three cats.

achievements & influence

BKVibro (react/nodejs): software developer with strong influence on frontend direction, architecture discussions, and delivery structure. I help split complex features into smaller, clearer tasks and contribute to architecture council discussions. I introduced and improved code quality standards across BKV products, including monorepo/poly-repo cleanup, ESLint configuration, CI/CD improvements, AI-assisted code review, design-token/design-system automation, and E2E visual regression testing.

Luxai (wordpress/nextjs/python): Joined a short UI-focused assignment and grew into a leading frontend/fullstack role within three months. Designed, built, and maintained admin-facing applications, including advanced forms, PDF printing flows, mobile support, reusable components, and scalable frontend architecture. Cleaned up WordPress projects and admin areas, supported rebranding, and improved maintainability through reusable UI patterns.

Beeyay (reactjs): Solved high-impact SEO and CLS issues across the product. Cleaned up obsolete code and outdated solutions, improved UX/UI consistency in Figma, guided junior developers, and helped introduce a PWA concept. Strengthened the frontend delivery process by improving maintainability, responsiveness, and implementation quality. SSR/hydration improvement

Silobreaker (angular/angularjs/react): Contributed dashboard product used by multiple developers and stakeholders (early nextjs). I worked with RxJS, introduce observable-based state management, custom directives, pipes, injections, animations, and memory-management improvements. I cooperated closely with UX/UI and backend teams, simplified API models, supported sprint demos, and contributed to AngularJS-to-Angular refactoring.

UpHotel/FutureOn (nextjs/nodejs/python): Freelance fullstack/product delivery work in startup-like environments, with direct client cooperation and broad ownership. I contributed to UI/UX direction, milestone planning, frontend architecture, backend/API design, CI/CD setup, Dockerization, and fullstack feature delivery. I built prototype-driven applications, dynamic galleries, map-based navigation, reporting features, and data visualizations.

Teleste (angular): Built low-fi prototypes and frontend foundations for internal products, contributed to Docker/CI experiments, and supported early product shaping through mockups and implementation feedback.

Nokia (reactjs/angular/nodejs/php): Junior fullstack developer contributing to internal applications in early Angular and React-based environments. I worked on dashboard-like tools for sales and data-access tooling for analysts, including interfaces that allowed sales to fetch telecom mast data without writing code.
